

## Ironwood Forest National Monument Resource Management Plan and Environmental Impact Statement

# Draft Goals and Objectives – Grazing/Livestock Management

**Goal:** Manage livestock grazing consistent with the *Arizona Standards for Rangeland Health and Guidelines for Grazing Administration* (Standards).

### Objectives:

1. Remedy non-compliance with Standards prior to the next grazing season.
2. Manage all allotments to a "Good" ecological condition and no worse than a "Stable" trend ecological condition.
3. Where range improvements are necessary and/or permitted, access and activities will be located and implemented to minimize additional disturbance to resources.
4. Eliminate trespass grazing.
5. Classify allotments (i.e., open or closed; and if open, perennial, perennial-ephemeral, or ephemeral), based on ecological condition, species composition, and values and needs of other resources.
6. In areas categorized as closed to grazing, existing range improvements may be removed if they are not necessary for management or conservation of other resources (e.g., cultural resources, recreation, etc.).
